

DEGEN

DegenDuel Multi-Asset Evolution Plan

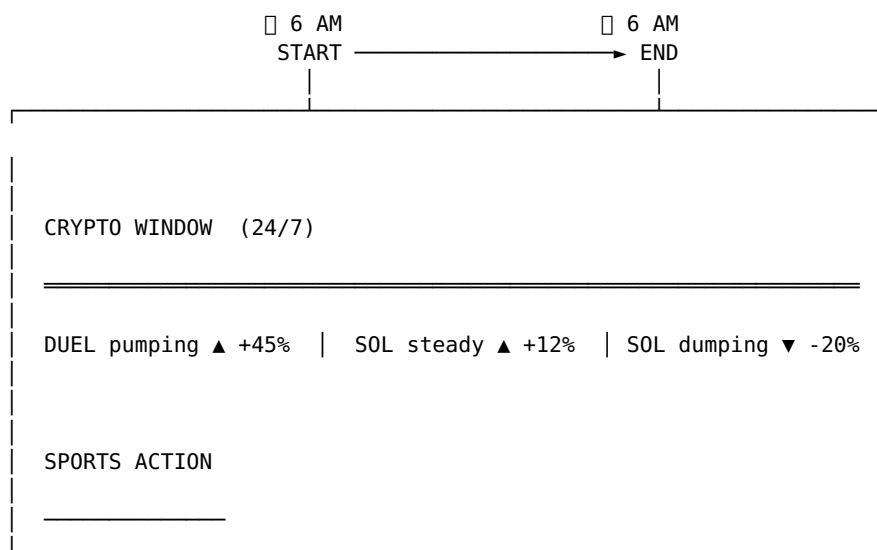

Core Idea

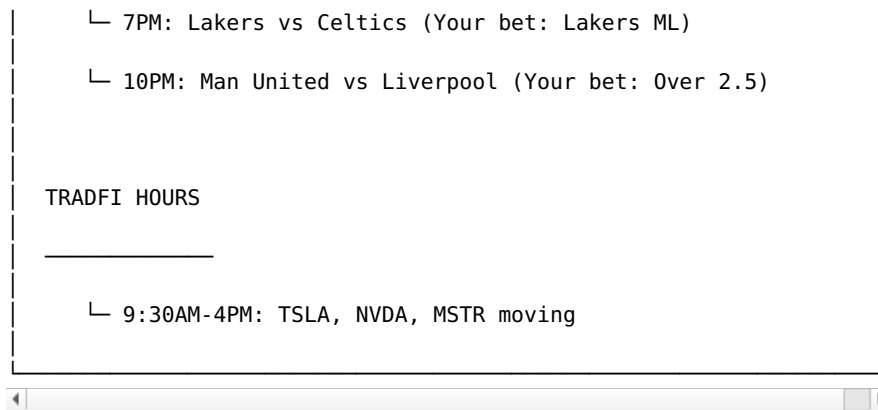

DegenDuel becomes the ultimate crypto fantasy platform - now with the ability to mix in sports bets, stocks, and more. Everything becomes a tradeable position in your crypto-first portfolio.

How It Works

1. **Start a DegenDuel contest with 100 Sim SOL**
2. **Build your portfolio... with some spice:**
 - 40% DUEL (soon to moon; holders have high IQ)
 - 20% HOBBS (ansem might skill)
 - 15% FLOYDAI (will never die; utility play)
 - 10% \$TSLA (funding could get secured)
 - 10% on Red Sox to lose (shit players w/ zero talent)
 - 5% ETH (diversity hire)
3. **Watch it all move in real-time**
 - Crypto prices update constantly (the main attraction)
 - Sports bets
 - Stock prices (incorporate leverage and shorting)
 - All asset values convert to SOL
4. **Highest portfolio value wins the pot**

(Example) DegenDuel 24-Hour Contest Flow

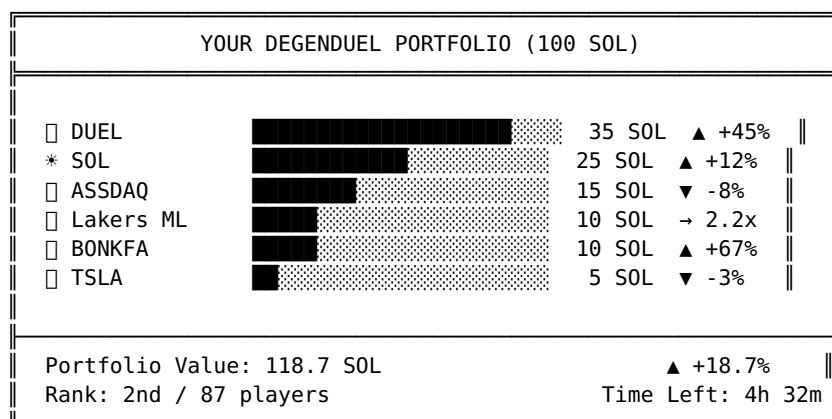

Start with the major sports everyone actually cares about: - **NBA/NFL** (when in season) - **Soccer** (Premier League, Champions League, World Cup) - **Baseball** (sure, why not) - **WNBA** (honestly might get more action than baseball)

The possibilities are literally endless - MMA fights, F1 races, tennis matches, eSports tournaments, political betting markets, award shows, weather events. If odds exist for it, it can go in your portfolio.

DegenDuel Portfolio Visualization

Why This Is Revolutionary

- **No other platform does this** - DFS is sports only, trading apps are stocks only, crypto platforms are crypto only
- **Pure strategy gameplay** - Mix conservative positions with moonshots across any asset class
- **Infinite variety** - Every day brings new games, new markets, new opportunities

The Beautiful Simplicity

A Lakers win is just a 2.5x asset. A Lakers loss is a -100% asset. Mix that with SOL doing +15% and TSLA down -3%, and you've got a dynamic portfolio that's actually fun to watch.

What We Need

1. **Sports odds data feed** - Real-time from major sportsbooks
2. **Unified pricing** - Everything converts to SOL value
3. **Clean UI** - Show all assets in one portfolio view
4. **Fast settlement** - Instant updates when games end

Advanced Features (Future Releases)

Leverage Trading

For stocks and commodities only (crypto is volatile enough): - **5x leverage** on S&P 500 ETFs and commodities/metals - **3x leverage** on individual stocks - Risk it all or play it safe - your call

Short Positions

Bet against assets you think will drop: - Short TSLA if you think Elon's tweeting bearishly. - Bet the Knicks to lose (same as betting moneyline on opponent) - Allows unique hedging strategies and more complex plays

Note: Crypto positions remain long-only. They're already volatile enough without adding complexity.

The Opportunity

Fantasy sports is a \$10B market. Crypto trading is a \$1T market. Sports betting is a \$100B market. We're the first to combine them all into one game.

Users can finally build the portfolio they actually want - part investment, part gamble, all competition.

Build your dream portfolio. Mix sports bets with crypto. Add some Tesla. Throw in gold futures. This is the future of fantasy trading.
